A Free Do-It-Yourself Tip from DisasterGuy.com

Sink Stopper from a Plastic Bag: DIY!

If you need a stopper for a sink or tub, make one with a plastic bag! Fill the plastic bag with water, getting all the air out. Tie the bag shut with a rubber band.

Place the plastic bag in, and over, the drain hole. Now you can add water and fill the sink or tub. The pressure of the water you add keeps the plastic bag in the hole and seals the hole.

This is a great trick in hotels or motels whose tubs do not have stoppers.
